Experience

AI Engineer | *Graphcore, Bristol HQ* September 2022 – Present

- AI Engineer in the large models team at an AI accelerator startup.
- Ported a **176 billion** parameter large language model (**Bloom-176B**) to IPU, utilising tensor parallelism and phased execution across 16 accelerators.
- Now working on text-to-image models, porting **Stable Diffusion** finetuning and Dreambooth to IPU.

Teaching Assistant | *Durham University, United Kingdom* September 2020 – March 2022

- Taught introductory Python programming and propositional logic to first-year students at a top-10 UK university.
- Involved remote and in-person teaching, presenting content, creating class notes, and answering questions from students with varied technical backgrounds.

Research Intern | *OFFIS – Institut für Informatik, Oldenburg, Germany* June – September 2021

- Research Intern as part of the DAAD RISE Germany research exchange scheme and supervised by Dr. Benjamin Cauchi.
- Self-proposed project using **contrastive predictive coding** for the unsupervised representation learning of binaural audio to improve non-intrusive speech intelligibility prediction systems. Our measure highly correlated with the ground truth (**>90%**) and surpassed all baselines.
- **Accepted at IEEE Signal Processing Letters.**

Cyber Security Intern | *Her Majesty's Government, United Kingdom* July – September 2019

- Completed cyber security training courses on offensive and defensive tactics.
- Carried out an individual project into using LSTM neural networks for computer network intrusion detection.

Highlighted Projects

PyTorch Paper Implementations | *Python, PyTorch, Generative Modelling, Natural Language Processing.*

- Many open-source projects reimplementing developments in AI research, with a focus on modularity, cleanliness, and educational value. Below are some highlighted projects:
- **VQ-VAE-2** implementation that supports an arbitrary number of vector quantization codebooks, evaluated on FFHQ-1024 image reconstructions. [\[Github\]](#)
- Step-unrolled denoising autoencoders (**SUNDAE**) for non-autoregressive, character-level text generation. Improved inference speed via masked sampling. [\[Github\]](#)
- **ALBERT** (A Lite BERT) with efficient attention finetuned for multi-label sentiment analysis on the JIGSAW Toxicity Classification Dataset using Huggingface datasets. [\[Github\]](#)
- Implementations of DQN variants and **Rainbow DQN** in the Atari Learning Environment. [\[Github\]](#)
- Currently working on an implementation of **SpecGrad**, a diffusion vocoder model. [\[Github\]](#)

ptpt: PyTorch Personal Trainer | *Python, PyTorch*

- Personal framework built around PyTorch for rapid experimentation and iteration. Focused on abstracting implementation details and engineering tricks whilst retaining flexibility.
- Features automatic mixed-precision, compute device management, arbitrary callback functions, and Weights and Biases integration that can be applied with minimal code change.

Stable Diffusion Inpainting x Segmentation | *Python, PyTorch, Huggingface, Gradio*

- Web demo in **Gradio** that combines **Stable Diffusion** inpainting with a segmentation model.
- Segmentation model produces per-class masks which can be individually controlled for fast and controllable mask generation.

Education

Durham University

United Kingdom

MEng. Computer Science

October 2018 – June 2022

- Graduated with a **first class** honours degree with a **79.66%** average.
- Master's thesis on fast image generation using step-unrolled denoising autoencoders, capable of generating **megapixel images in ≈ 2 seconds**.
- *Relevant Modules: Deep Learning, Reinforcement Learning, Machine Learning, Advanced Computer Vision, Natural Language Processing, Parallel Scientific Computing I/II, Single Mathematics A.*

Research

- **Alex F. McKinney** and Chris G. Willcocks | Megapixel Image Generation with Step-Unrolled Denoising Autoencoders | 2022 | [arXiv]
- **Alex F. McKinney** and Benjamin Cauchi | Non-intrusive Speech Intelligibility Prediction from Discrete Latent Representations | 2022 | [IEEE Signal Processing Letters]

Skills

Programming Languages

Proficient in:
Experience with:

Python.
Rust, C/C++ , JavaScript, \LaTeX .

Libraries and Frameworks

Proficient in:
Experience with:

PyTorch, NumPy, Huggingface.
Jax, Flax, Gradio, TensorFlow, Matplotlib, Scikit-learn, Pandas, W&B.

Software

Git/GitHub, Bash/Zsh, Linux, Conda, Slurm, Vim, Jupyter, Tmux.
